Lambertian & homogeneous calibrated source

White LEDSource's benefits

Quasi Lambertian source with continuous radiance from 400 to 700nm

Homogeneous all over the surface

Excellent source stability with real time monitoring

Easy luminance setting between 70 and 1400 cd/m²

Easy software automation with ActiveX control

Ideal for film transmittance measurements

ADVANCED COLORIMETRY by ELDIM

LEDSource description

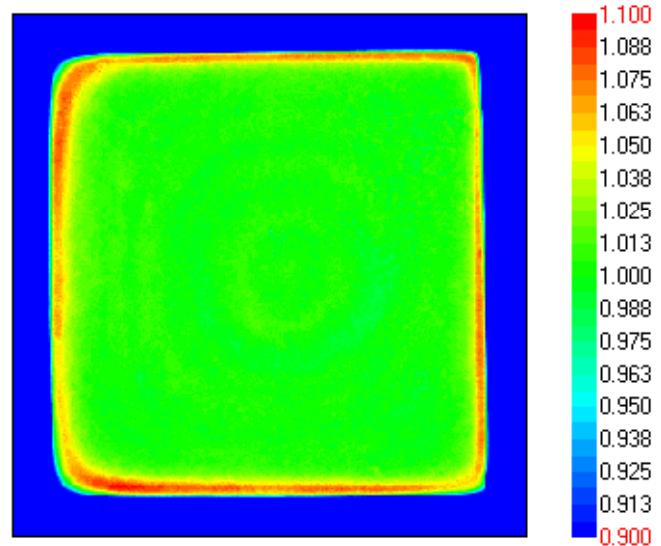

WHITE LEDSource includes a great number of white and violet LEDs regularly distributed on an integrated circuit on all the emissive surface. White LEDs provide the essential of the radiance between 440 and 700nm. The violet LEDs provide radiance between 400 and 440nm. An internal photodiode gives a reference signal to stabilize the emission in real time. Proprietary method is used to homogenize the emissive surface and provide angular emission near Lambertian source.

LEDSource calibration & specifications

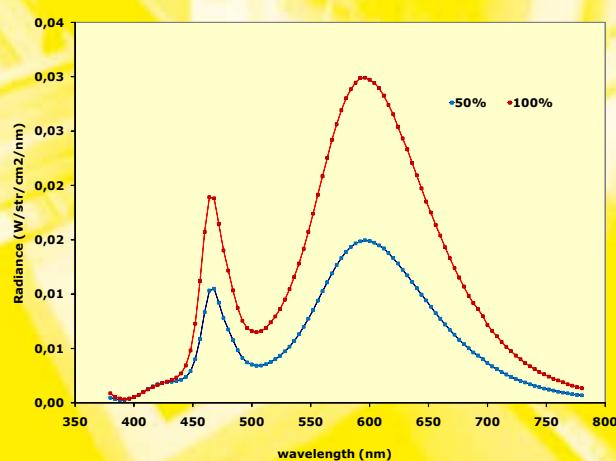

The absolute luminance of the device is measured using a Topcon SR3 system mounted on a reference goniometer. The emission is azimuth independent but depends on the incidence angle (see below). It is not far to be Lambertian except at very grazing angle. Internal calibration ensures excellent luminance linearity . Each system is provides with all its calibrated angular and spectral characteristics.

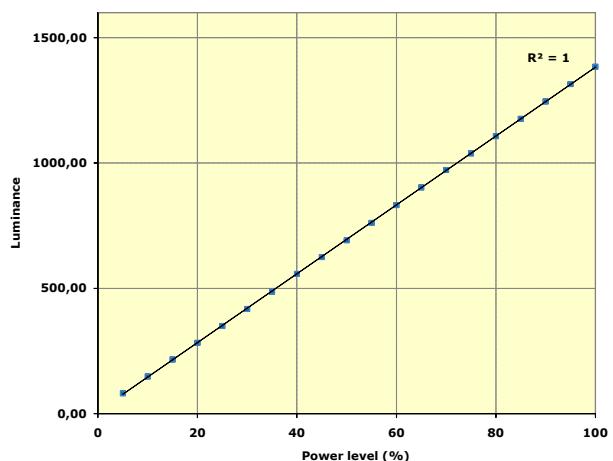

Normal incidence luminance at level 100% versus incidence angle

luminance homogeneity measured by video-luminance meter

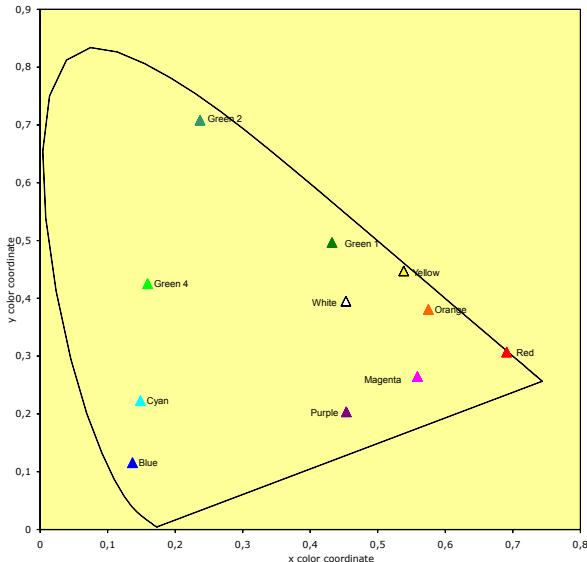

Spectral radiance at two levels 50 and 100%

Calibration of the luminance linearity

Optional color filters

The white LEDSource can be provided with an optional set of color filters for precise color calibration. The nine color filters covers a great part of the chromatic plane (see below and the table). Then the color calibration can be made within a great part of the chromatic plane. The color filter set is provided with the different absolute transmittances and the color coordinates measured by reference SR3 spectrophotometer using the LEDSource.

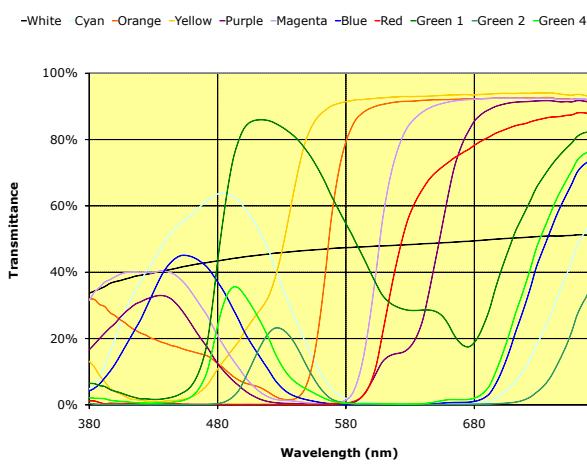

Used with LEDSource color filters cover most of the chromatic plane

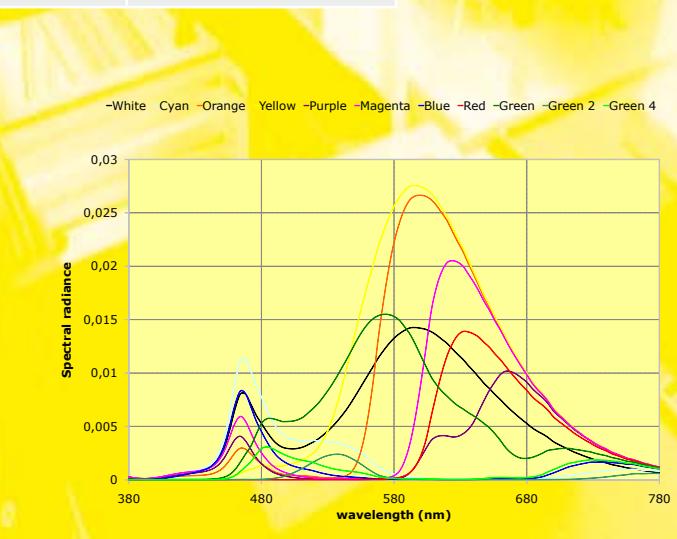

ELDIM's LEDSource color filters

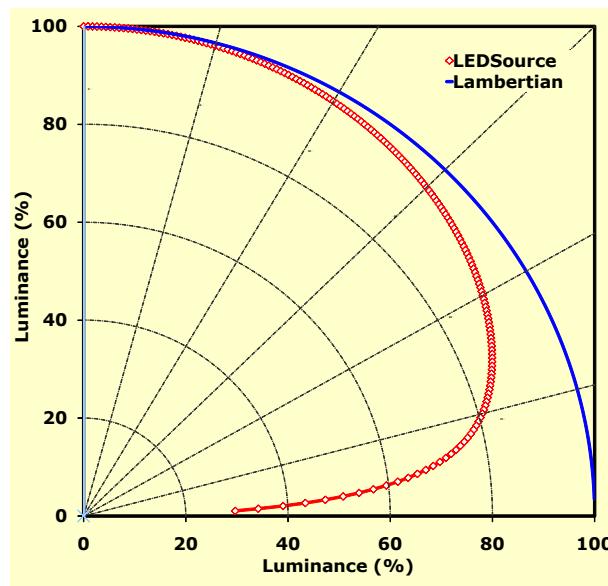

Color Filter	Color Coordinates	
	x	y
None	0.453	0.395
Red	0.691	0.307
Orange	0.575	0.381
Yellow	0.538	0.447
Green1	0.432	0.496
Green2	0.237	0.708
Green4	0.159	0.425
Cyan	0.148	0.223
Blue	0.137	0.115
Magenta	0.559	0.265
Purple	0.453	0.203

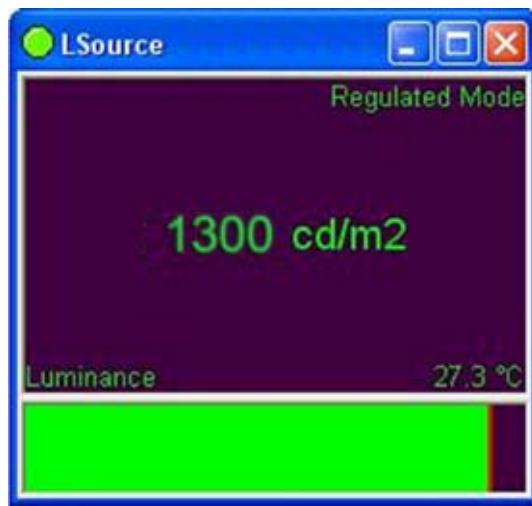

Example of filter transmittance

Spectral radiance of LEDSource with some color filters

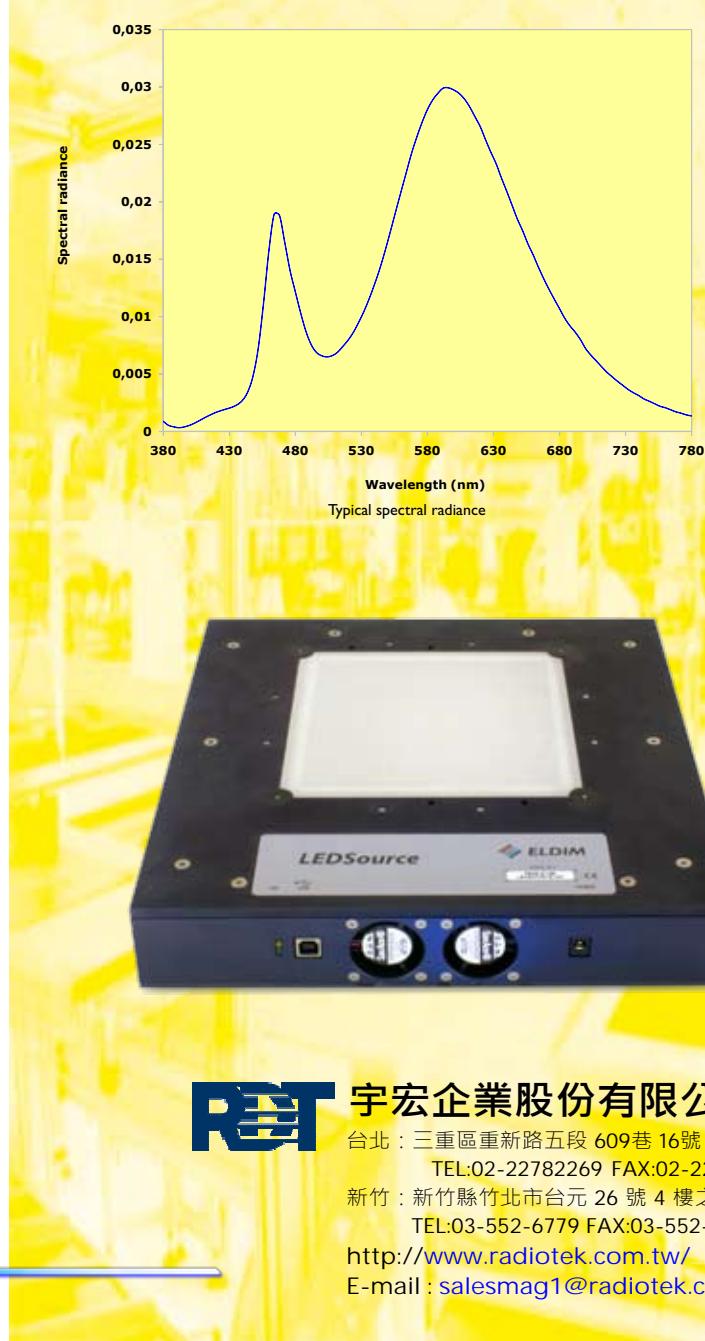

LEDSource angular response near to Lambertian source

Easy software interface
